Jaipur, Rajasthan

Summary

Flutter Developer with 1.5+ years of experience building cross-platform applications using Dart and Flutter for Android, iOS, and Web platforms. Experienced in developing responsive and scalable user interfaces, implementing state management using BLoC, and integrating Firebase services for backend functionality. Built multiple projects including a music streaming application and a Flutter-based website, focusing on performance, clean architecture, and user experience. Passionate about exploring innovative ways to use Flutter technology and continuously improving mobile and web application development practices.

Projects

MUSIX – Music Player App | Flutter, Dart, BLoC

- Developed a local music player application using Flutter that scans and plays audio files stored on the device.
- Implemented BLoC state management to manage playback state and dynamic UI updates.
- Built features including music library browsing, playback controls, and designed the architecture to support future online streaming features.

Flutter Portfolio Website | Flutter Web, Dart

- Designed and developed a responsive personal portfolio website using Flutter Web.
- Showcases Flutter projects, technical skills, and developer profile in a clean UI.
- Optimized layout for cross-device compatibility and performance.
